

Zinc Stearate Material Lubricant

Zinc Stearate is an internal lubricant for thermoplastic resins (especially styrenes) to ease material passage through the barrel.

- Often eliminates the need for mold release agents — acts as a paintable mold release
- Often improves cycle time
- Melt Point: 249.8° F

Acrawax® C Material Lubricant

Acrawax® C Material Lubricant is an excellent internal lubricant for Nylon, PVC and Polyurethane. When properly proportioned*, Acrawax® C often:

- Improves color dispersion
- Speeds machine cycle times
- Eliminates the need for mold release agents
- Imparts antistatic properties to molded parts
- Melt Point: 285.8° F

Often reduces static problems and color separation in the hopper and material feed system.

* Typically .25% to 5.00% by weight.
With Nylon and PVC, .25% to 3.00% by weight.
With Polyurethane .40% by weight.
