AVOID "ALL-PURPOSE" BOLTS AND WASHERS. The most costly mistake you can make, is to use a bolt that is too short and strip the threads in a platen hole. Check clamp bolt engagement. It should enter die plate at least 1 1/4 (preferably 1 1/2) times the bolt diameter. Commercial bolts, socket head screws and soft steel washers require frequent, costly replacement, as bolt heads are too small and conventional washers bend when used on injection molds. You can avoid damage to your mold, cut your setup time and save money wasted on makeshifts by using bolts and washers made expressly for injection plants.
